111	(a)	112	(b)	113	(b)	114	(b)	115	(a)										

SOLUTION

1. (d) The correct answer is option (d) i.e. Monday.
4th day of the month = Friday
3 days after 25th day = 28th day of the month
Total days from the 4th day to the 28th day of the month = 24 day
Number of odd days in 24 days = 24 ÷ 7 = 3 days
Friday + 3 = Monday

2. (c) The correct answer is option (c) i.e. Saturday
5th day of the month = Wednesday.
2nd day after the 20th day of the month = 22nd day of month
Number of days from the 5th day to the 22nd day of the month = 17 days
Number of odd days = 17 ÷ 7 = 3
So, Wednesday + 3 = Saturday
Hence, 2nd day after the 20th day of the month is Saturday.

3. (c) The correct answer is Option (c) i.e Saturday.
4th day of the month = Sunday
6th day before 30th day day of month = 24th day of the month
Total days from 4th day to the 24th day of the month = 20 day
Number of odd days in 20 days = 20 ÷ 7 = 6 days
Sunday + 6 = Saturday

4. (a) The correct answer is Option (a) i.e. Monday.
If the 3rd day of the month = Monday,
4th day before the 21st day of that month = 17th day
Number of odd days between 3rd day and 17th day of the month = 14 ÷ 7 = 0 odd days
Therefore, the 4th day before the 21st day of the month will also be Monday, as it will be the same day of the week as the 3rd day.

CAREERWILL APP
Easy to Learn....

5. (d) The correct answer is Option (d) i.e. Thursday.
Day on the 26th January (Republic Day) = Friday
Number of days between 26 Jan to 15 Feb = 20
Number of odd days = 20 ÷ 7 = 6
So, Friday + 6 = Thursday
15th of Feb will be Thursday.

6. (b) The correct answer is Option (b) i.e. Thursday.
The day before yesterday was Sunday and yesterday was Monday Now today it is Tuesday and tomorrow will be Wednesday the day after tomorrow will be Thursday.

7. (b) The correct answer is option (b) i.e. Friday.
2003 to 2010 = 7 years (2 Leap years + 5 ordinary years)
Odd days in 2 Leap years = (2 × 2) = 4
Odd days in 5 ordinary years = (5 × 1) = 5
Total odd days = 4 + 5 = 9 days = 1 week and 2 odd days
Thus, 19 November 2010 = Wednesday + 2 = Friday
Days between 19 November 2010 to 25 March 2011 = 11 (remaining days in November) + 31 (December) + 31 (January) + 28 (February) + 25 (March) = 126 days
= 126 days 126/7 = 18 weeks and 0 odd days.
So, 25 March 2011 will be Friday + 0 = Friday.

8. (d) The correct answer is option (d) i.e. Friday.
1 January 2020 was a Wednesday.
Since, 2020 is a leap year and leap year has 2 odd days.
So, 1 January 2021 = Wednesday + 2 odd days = Friday.

9. (d) The correct answer is option (d) i.e. Tuesday.
Number of odd days from 15 December 2006 to 31 December 2008 = 16 + 365 + 366 = 747 days
Number of days from 1 January 2009 to 13 October 2009 = 31 + 28 + 31 + 30 + 31 + 30 + 31 + 31 + 30 + 13 = 286 days
Total days from 15 December 2006 to 13 October 2009 = 747 + 286 = 1033 days
Number of odd days = 1033/7 = 4 odd days
So, if 15 December 2006 is a Friday, then on 13 October 2009 it will be Tuesday.
Hence, Tuesday is the correct answer.

10. (a) The correct answer is option (a) i.e. Tuesday.
Number of days from 6 May 2005 to 6 May 2018
Number of leap years: 3 (2008, 2012, 2016)
Number of normal years: 10
Total days from 6 May 2005 to 6 May 2018 = (10 × 365) + (3 × 366) = 3650 + 1098 = 4748 days
Number of days from 6 May 20018 to 25 September 2018: 25 + 30 + 31 + 31 + 25 = 142
Total days from 6 May 2005 to 25 September 2018 = 4748 +142 = 4890 days
Number of odd days = 4890/7 = 4 odd days
So, if 6 May 2005 is a Friday then on 25 September 2018 it will be Tuesday.
Hence, Tuesday is the correct answer.

11. (b) The correct answer is option (b) i.e. Sunday.
Number of days from 15 August 2006 to 15 August 2012
Number of leap years = 2
Number of normal years = 6
Total days from 15 August 2006 to 15 August 2012 = (2 × 366) + (4 × 365) = 732 + 1460 = 2192 days
Number of days from 15 August 2012 to 19 February 2012 = 4
So, Total days = 2192 + 4 = 2196
Number of odd days = 2196/7 = 5 odd days
⇒ Tuesday + 5 odd days = Sunday
Thus, if 15 August 2006 is a Tuesday, then on 19 February 2012 it will be Sunday.

12. (a) The correct answer is option (a) i.e. Tuesday.
2007 to 2012 = 5 Years (3 Ordinary Years and 2 Leap Years 2008, 2012),
So, 2 Leap Years have 4 odd days, and, 3 Ordinary Years have 3 odd days.
Total odd days = 4 + 3 = 7 odd days.
7 odd days = 7/7 = 1 week and 0 odd days.
Then, 9 March 2012 will be Friday + 0 = Friday.
Now, the number of days between 9 March 2012 to 13 March 2012 = 4 days.

CAREERWILL APP
Easy to Learn....

So, 13 March 2012 will be Friday + 4 = Tuesday.

13. (c) The correct answer is option (c)i.e. Monday.
1956 to 1966 = 10 Years (8 Ordinary Years and 2 Leap Years).
And, In 10 Years = 2 Leap years and 8 Ordinary Years.
Total odd days = 4 + 8 = 12.
12 odd days 12/7 = 1 week and 5 odd days.
Then, 29 December 1966 will be Saturday + 5 = Thursday.
Now, the number of days between 29 December 1966 to 16 January 1967 = 2 (December) + 16 (January) = 18 days.
18 days → 18/7 = 2 weeks and 4 odd days.
So, 16 January 1967 will be Thursday + 4 = Monday.

14. (d) The correct answer is option (d) i.e. Tuesday.
Given: 26 September 2005 was Monday.
Now, 2005 to 2017 = 12 Years (9 Ordinary Years and 3 Leap Years).
And In 12 Years = 3 Leap years and 9 Ordinary Years.
So, 3 Leap Years have 6 odd days, and, 9 Ordinary Years have 9 odd days.
Total odd days = 6 + 9 = 15.
15 odd days → 15/7 = 2 weeks and 1 odd day.
Then, 26 September 2017 will be Monday + 1 = Tuesday.

15. (d) The correct answer is option (d) i.e. Saturday.
The day of the week for 23 December 2006, start from 16 July 2001 (Monday).
From 2001 to 2006, there are 5 years with 6 odd days.
Thus, 16 July 2006 is Sunday.
From 16 July to 23 December 2006 is 160 days, which is 22 weeks and 6 days,
So, 23 December 2006 will be Sunday + 6 = Saturday.

16. (c) The correct answer is option (c) i.e. Tuesday.
If 19 July 2000 is Wednesday given,
2000 to 2015 = 15 Years (12 Ordinary Years and 3 Leap Years).
Total odd days = 6 + 12 = 18.
18 odd days → 18 ÷ 7 = 2 weeks and 4 odd days.
Then, 19 July 2015 will be Wednesday + 4 = Sunday.
Now, the number of days between 17 March 2015 to 19 July 2015
= 14(March) + 30(Apr) + 31 (May) + 30(June) + 19(July) = 124 days.
124 days → 124 ÷ 7 = 17 weeks and 5 odd days.
So, 17 March 2015 will be Sunday – 5 = Tuesday.

17. (a) The correct answer is option (a) i.e. Thursday.
2003 to 2015 = 12 Years (9 Ordinary Years and 3 Leap Years).
So, 3 Leap Years have 6 odd days, and, 9 Ordinary Years have 9 odd days.
Total odd days = 6 + 9 = 15.
15 odd days → 15 ÷ 7 = 2 weeks and 1 odd day.
Then, 10 October 2015 will be Friday + 1 = Saturday.
So, the number of days between 10 October 2015 to 8 October 2015 = 2 days.
So, 8 October 2015 will be Saturday – 2 = Thursday.

18. (a) The correct answer is option (a) i.e. Friday
Given, day on 23 January 2002 was Wednesday.
2002 to 2007 = 6 Years (4 Ordinary Years and 1 Leap Year)
Total odd days = 2 + 4 = 6
Number of odd days from 24 january 2007 to 26 january 2007 = 3 odd days
So, total odd days = 6 + 3 = 9 ÷ 7 = 2 odd days
So, day on 26th January 2007 is = Wednesday + 2 = Friday

19. (d) The correct answer is option (d) i.e. Thursday
2013 to 2018 = 5 Years (4 Ordinary Years and 1 Leap Year)
Total odd days = 2 + 4 = 6
Then, 26 November 2018 will be Tuesday + 6 = Monday
The number of days between 26 November 2018 to 29 November 2018 = 3 days = 3/7 = 0

CAREERWILL APP
Easy to Learn....

weeks and 3 odd days
So, 29 November 2018 will be Monday + 3 = Thursday.

20. (d) The correct answer is option (d) i.e. Saturday.
Odd days in 36 days → 36/7 = 1 odd day
Since, 36 days from today is a Sunday, then 1 day before Sunday is Saturday.

21. (b) The correct answer is option (b) i.e. Sunday.
2009 to 2013 = 4 Years (1 Leap Year + 3 Ordinary Year)
Total odd days = 2 + 3 = 5
11 November 2013 will be = Wednesday + 5 = Monday
Thus, days between 11 November 2013 to 17 November 2013 = 6 days.
So, 17 November 2013 will be = Monday + 6 = Sunday.

22. (d) The correct answer is option (d) i.e. Thursday.
2010 to 2017 = 7 years (5 ordinary year + 2 leap year)
So, total odd days = 5 + 4 = 9 = 1 week and 2 odd days
Thus, 16 September 2017 will be Thursday + 2 = Saturday
Days between 17 August 2017 to 16 September 2017 = 14 (August) + 16 (September) = 30 days → 30/7 = 4 weeks and 2 odd days.
So, 17 August 2017 will be Saturday – 2 = Thursday.

23. (c) The correct answer is option (c) i.e. Sunday.
2005 to 2011 = 6 Years (1 Leap year + 5 Ordinary year)
Total odd days = 2 + 5 = 7 → 1 week and 0 odd days
So, 05 August 2011 = Friday + 0 = Friday
Now days between 17 April 2011 to 05 August 2011 = 13 + 31 + 30 + 31 + 5 = 110 → 15 weeks and 5 odd days
Thus, 17 April 2011 will be = Friday – 5 = Sunday

24. (c) The correct answer is option (c) i.e. Saturday.
2004 to 2019 = 15 Years (11 Ordinary years + 4 leap years)
Total odd days = 11 + 8 = 19 = 2 Weeks + 5 Odd days
19 February 2019 will be Thursday + 5 = Tuesday
Now days between 19 February 2019 to 2 March 2019 = 9 (Feb) + 2 (March) = 11 days → 1 Weeks + 4 odd days
So, 2 March 2019 will be Tuesday + 4 = Saturday

25. (b) The correct answer is option (b) i.e. Friday.
2001 to 2015 = 14 Years (3 Leap Year + 11 Ordinary Year)
Total odd days = 11 + 6 = 17 → 2 weeks + 3 odd days
So, 29 July 2015 will be Sunday + 3 = Wednesday
Days between 20 February 2015 to 29 July 2015 = 8(February) + 31(March) + 30(April) + 31(May) + 30(June) + 29(July) = 159 days.
159 days → 159/7 = 22 weeks and 5 odd days.
So, 20 February 2015 will be Wednesday – 5 = Friday

26. (a) The correct answer is option (a) i.e. Friday.
2004 to 2007 = 3 Ordinary Years = 3 odd days
Now 25 October 2007 will be Monday + 3 = Thursday
Days between 25 October 2007 to November 2007 = 6 days (October) + 2 days (November) = 8 days
8 days → 8/7 = 1 week and 1 odd days.
So, 2 November 2007 will be Thursday + 1 = Friday.

27. (d) The correct answer is option (d) i.e. Saturday.
22 March 2000 to 22 March 2010 = 10 Years (2 Leap Year + 8 Ordinary Years)
So, odd days = 4 + 8 = 12 ÷ 7 → 1 Weeks + 5 Odd days
22 March 2010 will be = Wednesday + 5 = Monday
Days between 22 March 2010 to 16th January 2010 = 22 (March) + 28 (February) + 15 (Jan) = 65 ÷ 7 → 9 Weeks + 2 Odd days

CAREERWILL APP
Easy to Learn....

Thus, 16th January 2010 = Monday – 2 = Saturday

28. (d) The correct answer is option (d) i.e. Saturday.
19 February 2014 to 19 February 2022 = 8 Years (2 Leap Year + 6 Ordinary Years)
So, odd days = 4 + 6 = 10 → 1 Week + 3 Odd day
19 February 2022 = Wednesday + 3 = Saturday

29. (a) The correct answer is option (a) i.e. Wednesday.
10 days ago was Sunday, so today is Sunday + 10 days = Wednesday
6 days from today is Tuesday, which confirms today is Wednesday.

30. (d) The correct answer is option (d) i.e. Tuesday.
Since, 23 June 2008 to 23 June 2020 = 12 years (3 leap years and 9 ordinary years)
Total odd days in 12 years = (3 × 2) + (9 × 1) = 15 ÷ 7 = 1 (remainder)
Since, 23 June 2008 was Monday, so the day of the week on 23 June 2020 = Monday + 1 = Tuesday

31. (b) The correct answer is option (b) i.e. Wednesday.
2011 to 2019 = 8 Years (6 Ordinary Year and 2 Leap Year).
In 8 Years = 2 Leap years and 6 Ordinary Years.
Total odd days = 4 + 6 = 10.
10 odd days → 10 ÷ 7 = 1 week and 3 odd days.
Then, 20 March 2019 will be Sunday + 3 = Wednesday.

32. (b) The correct answer is option (b) i.e. Saturday.
2 October 2012 = Tuesday
So, no. of odd days from 2 Oct 2012 to 2 oct 2016 = 1 + 1 + 1 + 2 = 5 odd days
2 October 2016 = Tuesday + 5 = Sunday
So, on 1 October 2016 = Sunday – 1 = Saturday

33. (a) The correct answer is option (a) i.e. Tuesday.
Number of odd days = [1600 + 400 + (2001 to 2044) + (Jan 2045 to 5 Dec 2045)]
= 0 + 0 + (2 × 11 + 1 × 33) + 339
= (22 + 33 + 339) ÷ 7
= 394 – 7 = 2
The code for 2 is Tuesday.

34. (b) The correct answer is option (b) i.e. Friday.
Given: 1st January 2008 was a Tuesday
Days from 1st January to 4th July
Total days = 31 + 29 + 31 + 30 + 31 + 30 + 4 = 186 days
186 ÷ 7 = 26 weeks and 4 odd days Tuesday + 4 days = Friday

35. (d) The correct answer is option (d) i.e. Wednesday.
We know that 1st January 2000 was a Saturday.
The Leap and Normal Years from 2000 to 2027
Leap years (divisible by 4): 2004, 2008, 2012, 2016, 2020, 2024 → 6 leap years → 6 × 2 = 12 days
Normal years → 18 normal years → 18 × 1 = 18 days
Total extra days = 12 + 18 = 30 ÷ 7 = 4 weeks + 2 extra days, we add 2 days to Saturday.
Thus, 1st January 2028 will be a Monday.
From 1st January to 26th January, there are 25 days.
25 ÷ 7 = 3 weeks + 4 extra days.
Monday + 4 days = Friday

36. (b) The correct answer is option (b) i.e. Tuesday.
Given: 11 October 1969 is Saturday
Odd Number of days in normal Year = 1
Odd Number of days in Leap Year = 2
Total odd days = (1 + 1 + 2 + 1 + 1 + 1 + 2 + 1 + 20 + 29) = 59
Odd Days = 59 ÷ 7 = 3
29 November 1977 will be = Saturday + 3 = Tuesday

37. (c) The correct answer is option (c) i.e. Saturday.
Given: 14 May 1953 is Thursday
2 Leap Years 1956 and 1960 = 4 odd days
8 Normal Years = 8 odd days
Total odd days between 14th May 1953 to 14 May 1963 = 12 odd days
14 May 1963 will be = 12/7 = 5 odds = Thursday + 5 odd days = Tuesday
Odd days from 14 May 1963 to 27 July 1963

CAREERWILL APP
Easy to Learn....

= [17(May) + 30 (June) + 27 (July)] = 74 ÷ 7 = 4 odd days
So, 27th July 1963 will be Tuesday + 4 odd days = Saturday

38. (c) The correct answer is option (c) i.e. Saturday.
Normal Year = 365 days = 52 weeks + 1 day
So, number of odd days = 1 + 2 days
Tuesday – 3 days = Saturday

39. (a) The correct answer is option (a) i.e. 1076.
A year divisible by 4 is a leap year and for century years it should be divisible by 400.
So, 1076 is divisible by 4.
Hence, 1076 is a leap year.

40. (d) The correct answer is option (d) i.e. Saturday.
Given: 6 November 1925 was Friday.
1925 to 1933 = 8 Years (6 Ordinary Year and 2 Leap Year and 2 Leap years)
2 Leap years = 4 Odd days 6 ordinary Years = 6 odd days
Total odd days = 4 + 6 = 10 odd days = 10/7 = 1 week and 3 odd days
6 November 1933 wiil be: Friday + 3 = Monday
6 November 1993 to 16 December 1933 = 24 (Nov) + 16 (Dec) = 40 days
40 days = 40/7 = 5 weeks and 5 odd days
16 December 1933 will be:
Monday + 5 = Saturday

41. (d) The correct answer is option (d) i.e. Sunday.
Given: 21 January 2022 is Friday
(380 ÷ 7) = 54 weeks + 2 days
2 days after Friday is Sunday.

42. (a) The correct answer is option (a) i.e. Saturday.
Given: The 20th day of the month falls on the 4th day before Monday
So, 20th + 4 = 24th of the month will be Monday
A day will repeat itself after seven days which means the 17th, 10th, and 3rd of the month is Monday.
Therefore, the 3rd of the month (Monday) – 2 days = 1st (Saturday).

43. (a) The correct answer is option (a) i.e. Friday.
Given: The day after tomorrow = Monday
Tomorrow = Monday – 1 = Sunday
Today = Monday – 2 = Saturday
Now, 50 days ago from today,
As we know 7 days = 1 week,
So, 50 days = 50 ÷ 7 = 7 week and 1 odd day
Then 50 days ago from today = Saturday – 1 = Friday

44. (d) The correct answer is option (d) i.e. Thursday.
Calculate the total number of days between 5 May 1911 and 11 September 1919:
From 5 May 1911 to 5 May 1919 is 8 years.
From 5 May 1919 to 11 September 1919 is 129 days
Calculate the total number of days in 8 years:
There are 2 leap years (1912, 1916) and 6 normal years.
Total days = (6 × 365) + (2 × 366) = 2190 + 732 = 2922 days
Add the additional 129 days in 1919:
Total days from 5 May 1911 to 11 September 1919 = 2922 + 129 = 3051 days.
Find the remainder when 3051 is divided by 7 (since there are 7 days in a week):
3051 ÷ 7 = 435 weeks and 6 days remainder
Determine the day of the week:
Starting from Friday and moving forward 6 days: Friday + 6 days = Thursday.

45. (c) The correct answer is option (c) i.e. Friday.
1996 Leap year; Number of odd days = 2
1997 = Ordinary Year; Number of odd days = 1
25 March 1996 = Saturday + 2 = Monday
25 March 1997 = Monday + 1 = Tuesday
26 March 1997 to 12 dec 1997:
6 + 30 + 31 + 30 + 31 + 31 + 30 + 31 + 30 + 12 = 262 = 3 odd days: Tuesday + 3 = Friday

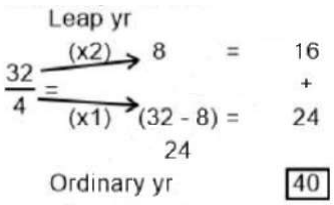

46. (a) The correct answer is option (a). i.e. Sunday.
15 Oct 2008 to 15 Oct 2009 = 1 odd day (Wednesday + 1 = Thursday)
15 Oct 2009 to 15 Oct 2010 1 odd day (Thursday + 1 = Friday)

CAREERWILL APP
Easy to Learn....

15 Oct 2010 to 15 Oct 2011 1 Odd day (Friday + 1 = Saturday)
15 Oct 2011 to 15 Oct 2012 = 2 Odd days (Saturday + 2 = Monday)
14 Oct 2012 is 1 day before 15 Oct 2012
So, 14 Oct 2012 = Sunday

47. (c) The correct answer is option (c). i.e. Saturday.
31 December 2010 = Thursday + 1 = Friday
25 Dec 2010 comes 6 days before 31 Dec 2010
So, Friday – 6 = Saturday

48. (a) The correct answer is option (a) i.e. Saturday.
For calculating the weekday of 1st January 2033, firstly we have to calculate the day on 31st December 2032.
2032 = 2000 + 32
Any multiple of 400 like 800, 1600, 2000 have 0 odd days Odd days of 2000 = 0
Odd days of 32 =

On dividing 40 by 7 = Remainder = 5
5 is the code for Friday.
So, Friday is on 31st December 2032.
Thus, Saturday will be on 1st January 2033.

49. (c) The correct answer is option (c) i.e. Monday.
Total number of odd days in a normal year = 1
Total number of odd days in a leap year = 2
Number of odd days from 13 September 2003 (Saturday) to 13 September 2004 = 2
So, Saturday + 2 day = Monday
Number of days from 13 September 2004 to 14 February 2005 = 17 (September) + 31 (October) + 30 (November) + 31 (December) + 31 (January) + 14 (February) = 154 days
Number of odd days = 154 ÷ 7 = 0 odd days
So, Monday + 0 = Monday

50. (a) The correct answer is option (a) i.e. Saturday.
9 March 2002: 2001 years + (Period from 1.01.2002 to 9.03.2002)
Odd day in 2000 years = 0 days
Odd days in 1 years = 1 days
1.01.2002 to 9.03.2002 = 31 days + 28 days + 9 days = 68 days = 9 weeks + 5 days
Total number of odd days = 6 days
The day will be Thursday.

51. (c) The correct answer is option (c) i.e. Sunday.
First, we need to check whether 2020 was a leap year.
2020 ÷ 4 = 505
So, 2020 was a leap year and hence February will have 29 days.
Now, to find out the day on 3 Feb 2019, we need to find out the day on 3 Feb 2020.
Consider 4th Feb 2020 to 3 March 2020 since this duration makes one month.
So, 26 + 3 odd days = 29
Since a week is 7 days, divide it by 7 = 29/7; Remainder = 1
It is given in the question that 3 March 2020 was Tuesday.
Hence, 3 Feb 2020 is Tuesday – 1 = Monday.
Therefore, 3 Feb 2019 is a Sunday.

52. (b) The correct answer is option (b) i.e. Friday.
The number of leap years between 2000 and 2012 = 3 (2004, 2008, and 2012)
The number of non-leap years between 2000 and 2012 = 9 (2001, 2002, 2003, 2005, 2006, 2007, 2009, 2010, and 2011)
Total number of odd days between 2000 and 2012 = 3 × 2 + 9 × 1 = 6 + 9 =151 odd day
19 July 2000 was a Wednesday
So, 19 July 2012 will be = Friday

53. (b) The correct answer is option (b) i.e. Friday.
10 June, 2011 = (2010 years + Number of days from 1.1.2011 to 10.6.2011)
Odd days in 1600 years = 0; Odd days in 400 years = 0
10 years = (2 leap years + 8 ordinary years) = (2 × 2 + 8 × 1) = 12 days → 5 odd days

CAREERWILL APP
Easy to Learn....

Number of days from 1.1.2011 to 10.6.2011
Total number of days = 161 days = 0 odd days
Total number of odd days = (0 + 5) = 5 → 5 odd days
Thus, the day is Friday.

54. (b) The correct answer is option (b) i.e. Thursday.

Day	Sun	Mon	Tue	Wed	Thu	Fri	Sat
Code	0 or 7	1	2	3	4	5	6

17th April, 2014 = 2013 years + Number of days from 1.1.2014 to 17.04.2014
Odd days in 1600 years = 0, Odd days in 400 years = 0
13 years = (10 ordinary years + 3 leap years) = (10 × 1 + 3 × 2) = 16/7; R = 2
Therefore, the number of Odd days = 2
Jan Feb Mar Apr
31 + 28 + 31 + 17 = 107 days
Therefore, 107 days = (15 weeks + 2 days) → 2 odd days
Total number of odd days = (0 + 0 + 2 + 2) = 4 odd days

55. (b) The correct answer is option (b) i.e. Monday.
24th October 2011 = 2000 years + 10 years + 1 Jan
2011 to 24 October 2011
No. of odd days = 2000 years = 0 odd days
10 years = 2 leap years (= 4 odd days) + 8 ordinary years (= 1 odd days) = 4 + 1 = 5 odd days
(Ordinary year = 365 ÷ 7 = 52 weeks + 1 odd day,
Leap year = 366 ÷ 7 = 52 weeks + 2 odd day)
1 Jan 2011 to 24 Oct 2011 = 297 days = 3 odd days
Total = 0 + 5 + 3 = 8 = 1 week and 1 odd days
1 is the code for Monday.

56. (c) The correct answer is option (c) i.e. 2031.
Given year 2025 2024 + 1 = Leap year + 1
Leap year = Repeat After 28 years
Leap year + 1 = Repeat After 6 years
Here, the year 2025 will be the same after 6 years, which means the year 2031 will be the same as the year 2031.

57. (b) The correct answer is option (b) i.e. Thursday.
Today is Sunday
10^{10}th days = 10000000000
Odd days in 10000000000
= 10000000000 ÷ 7 = 4 (remainder) odd days
So, the exactly on 10^{10}th day will be:
Sunday + 4 = Thursday

58. (c) The correct answer is option (c) i.e. Tuesday.
400 years contain 0 odd days. So, the last day of the 4th century is Sunday. This cycle is repeated. The last day of a century cannot be Tuesday, Thursday and Saturday.

59. (d) The correct answer is option (d) i.e. Friday.
The year 2006 is an ordinary year. So, it has 1 odd day.
So, the day on 8th Dec 2007 will be 1 day beyond the day on 8th Dec 2006. But, 8th Dec, 2007 is Saturday.
So, 8th Dec, 2006 is Friday.

60. (d) The correct answer is option (d) i.e. Thursday.
If today is Wednesday one day before the day is Monday and after the day, three days after the day before yesterday is Thursday.
Hence, today is Thursday.

61. (c) The correct answer is option (c) i.e. Sunday.
As mentioned the seventh day of the month is three days earlier than Friday which is Tuesday.
So, the fourteenth day is also Tuesday; thus, the nineteenth day is Sunday.

62. (d) The correct answer is option (d) i.e. 26.
If the 30th day is a Saturday, then the 29th is a Friday, the 28th is a Thursday, and so on.
Counting backward, the 1st day of the month was a Thursday.
The first Tuesday will be the 5th (since the 1st is Thursday, the 2nd is Friday, the 3rd is Saturday, the 4th is Sunday, and the 5th is Tuesday).
The second Tuesday will be the 12th.
The third Tuesday will be the 19th.
The fourth Tuesday will be the 26th.

CAREERWILL APP
Easy to Learn....

Hence, the correct answer is 26.

63. (b) The correct answer is option (b) i.e. Tuesday.
January 1, 2007 = Monday
As each year has 1 odd day.
So, Monday + 1 odd day = Tuesday
So, January 1, 2008, it will be Tuesday.
Hence, the correct answer is Tuesday.

64. (a) The correct answer is option (a) i.e. Sunday.
The year 2004 is a leap year. So, it has 2 odd days.
However, February 2004 is not included because we are calculating from March 2004 to March 2005. So, it has 1 odd day only.
The day on 6th March 2005 will be 1 day beyond 6th March 2004.
Given that, 6th March 2005 is Monday.
6th March 2004 is Sunday.

65. (c) The correct answer is option (c) i.e. 24.
1st day of the month = Saturday
Days of the month that will be Saturday's = 8th, 15th, 22nd, and 29th day
Days of the month that will be Sunday's = 2nd, 9th, 16th, and 23rd
According to the question;
2nd Saturday and all Sundays are holidays.
So, number of holiday's = 5
Number of working days = 29 – 5 = 24 days

66. (d) The correct answer is option (d) i.e. Thursday.
From 13th August 2017 (Thursday) to 13th August 2023, the odd days are:
(1 + 1 + 2 + 1 + 1 + 1) = 7 days (1 full week) = 0 odd days
So, 13th August 2023 is Thursday.
Adding 14 days (2 full weeks) to 27th August 2023, the day remains Thursday.

67. (c) The correct answer is option (c) i.e. Wednesday.
17th June, 1998 = (1997 years + Period from 1st January 1998 to 17 June 1998)
Odd days in 1600 years = 0
Odd days in 300 years = (5 × 3) = 1
97 years have 24 leap years + 73 ordinary years.
Number of odd days in 97 years (24 × 2 + 73) = 121 = 2 odd days.
Total days from January to June 17 = (31 + 28 + 31 + 30 + 31 + 17) = 168 days
168 days = 24 weeks = 0 odd day.
Total number of odd days = (0 + 1 + 2 + 0) = 3.
Thus, the 17th June 1998 was Wednesday.

68. (d) The correct answer is option (d) i.e. Sunday.
28 May, 2006 = (2005 years + Period from 1st Jan 2006 to 28 May 2006)
Odd days in 1600 years = 0
Odd days in 400 years = 0
5 years = (4 ordinary years + 1 leap year) = (4 × 1 + 1 × 2) = 6 odd days
Total odd days from Jan to May = (31 + 28 + 31 + 30 + 28) = 148 days
148 days = (21 weeks + 1 day) = 1 odd day.
Total number of odd days = (0 + 0 + 6 + 1) = 7 = 0 odd day.
Thus, 28th May, 2006 is Sunday.

69. (c) The correct answer is option (c) i.e. Friday.
On 31st December, 2005 it was Saturday.
Number of odd days from the year 2006 to the year 2009 = (1 + 1 + 2 + 1) = 5 days
On 31st December 2009, it was Thursday.
Thus, on 1st Jan 2010 it is Friday.

70. (b) The correct answer is option (b) i.e. Saturday.
Given: Today is Monday
Every day repeats after 7 days.
To find the day after 61 days;
Odd days = 61 ÷ 7 = 8 weeks + 5 odd days.
So, after 61 days = Monday + 5 odd days = 6 odd days = Saturday.
Hence, option (b) is the correct answer.

71. (a) The correct answer is option (a) i.e. Sunday.
Given: Today is Thursday
Every day repeats after 7 days.
To find the day after 59 days;
Odd days = 59 ÷ 7 = 8 weeks + 3 odd days.
So, after 59 days = Thursday + 3 odd days = 0

CAREERWILL APP
Easy to Learn....

odd days = Sunday.
Hence, option (a) is the correct answer.

72. (c) The correct answer is option (c) i.e. Wednesday.
The day before yesterday was Saturday.
Yesterday was Sunday, Today is Monday, Tomorrow will be Tuesday.
The day after tomorrow will be Wednesday.

73. (c) The ocrrect answer is option (c) i.e. 12th July is a Sunday if the year is a leap year.
Topic: Calender
Concept: Odd days
No. of days between 12th January to 12th July is:
19(january) + 28(february) + 31 (march) + 30(april) + 31(may) + 30(june) + 12(july) = 181
181 divided by 7 = 6 odd days
If 12th January is Sunday, 12th july is Saturday (Non-leap year)
Sunday (Leap year)
15th july is Tuesday (Non-leap year)
Wednesday (Leap year)
Therefore option (c) is correct.

74. (b) The correct answer is option (b) i.e. Saturday
Number of Days from 02/04/2021 to 22/05/2021 = (28 + 22) = 50
Odd days in 50 days = 50 ÷ 7 = 1 (remainder) odd day
So, the 22nd day of the next month = Friday + 1 = Saturday.

75. (d) The correct answer is option (d) i.e. Sunday.
If the 15th will be on Sunday then the month will start from Sunday so, the dates of Monday will be 2, 9, 16, 23, 30 → we get 3 even dates.
Hence, option (d) is the correct answer.

76. (d) The correct answer is option (d) i.e. 2015.
Given year 2009 = 2008 + 1 = Leap year + 1
Leap year = Repeat After 28 years
Leap year + 1 = Repeat After 6 years
Leap year + 2 = Repeat After 11 years
Leap year + 3 = Repeat After 11 years
Here, the year 2009 will be the same after 6 years, which means the year 2009 will be the same as the year 2015.

77. (b) The correct answer is option (b) i.e. Thursday.
5th Monday of April is possible only on two dates:
29th April or 30th April
If 29th April is Monday:
No. of days from 30th April to 1st November = (1 + 31 + 30 + 31 + 31 + 30 + 31 + 1) = 186 Days
No. of odd days = 186 ÷ 7 = 26 weeks and 4 odd days 1 November = Friday
29th November and 30th November are Friday and Saturday respectively.
So, in this case 5th Thursday is not possible.
If 30th April is Monday:
No. of days from 1st May to 1st November = (31 + 30 + 31 + 31 + 30 + 31 + 1) = 185 Days
No. of odd days = 185 ÷ 7 = 26 weeks and 3 odd days
Therefore, 29th November will be 5th Thursday.
Birthday of second child is on 29th November.
Thursdays in December = 6th December, 13th December, 20th December, 27th December.
Hence, 20th December is Thursday.

78. (b) The correct answer is option (b) i.e. Saturday.
Each day of the week is repeated after 7 days.
So, after 63 days, it will be Monday. After 61 days, it will be Saturday.

79. (b) The correct answer is option (b) i.e. Monday.
From 1st January 1995 (Sunday) to 1st January 1996, 1995 was not a leap year, so it had 365 days.
365 days = 52 weeks + 1 extra day (since 365 ÷ 7 gives a remainder of 1).
This extra day shifts the weekday forward by one day.
So the day on January 1, 1996, would be a Monday.

80. (b) The correct answer is option (b) i.e. Tuesday.
The fifth day before 26th is 21st of the month.
The number of days between 4th and 21st of the month = 21 – 4 = 17 days = 2 weeks 3 days

CAREERWILL APP
Easy to Learn....

The two week period will start from 5th which falls on Sunday and the two week period will end on Saturday.
The next three days after Saturday are Sunday, Monday, and Tuesday, Thus, the fifth day before the 26th of the month is a Tuesday.

81. (c) The correct answer is option (c) i.e. Friday.
Netaji Subhash Chandra bose birthday = 23rd January 1897 (Day = Wednesday)
But, 2000 is a leap year(366 days)
Number of days from 23rd January to 15 august in the year 2000 = (8 + 29 + 31 + 30 + 31 + 30 + 31 + 15) = 205 days
Odd days = 205 ÷ 7 = 2 days
Wednesday + 2 days = Friday
Hence, option (c) is the correct answer.

82. (b) The correct answer is option (b) i.e. 22.
Given: Second and fourth Saturdays and all Sundays are holidays
To find the minimum number of possible working days for any month of any year
Minimum days would be when days of the month are minimum. So the month should be February and the total days will be 28.
Total weeks = 4 (full and exact)
Saturday and Sundays = 4 + 2 = 6
Total working days = 28 – 6 = 22

83. (c) The correct answer is option (c) i.e. Friday.
There is one odd day in an ordinary year and two odd days in a leap year.
Thus, odd days in 1997 (Ordinary year) – 1
Odd days in 1998 (Ordinary year) – 1
Odd days in 1999 (Ordinary year) – 1
Odd days in 2000 (Leap year): From 1st Jan to 18 Feb – Jan (3 odd days) + Feb (4 odd days) = 7 odd days i.e. 0 odd days
Total number of odd days = 1 + 1 + 1 + 0 = 3
Thus, 18 Feb 1997 – Tuesday 18 Feb 2000 – Tuesday + 3 days = Friday
Hence, Friday is correct.

84. (c) The correct answer is option (c) i.e. Thursday.
We will add the odd number of days of each month from 25th May to 25th December.
May(6) + June(2) + July(3) + August(3) + September(2) + October(3) + November(2) + December(4)
Total number of odd days = 25 days i.e. 4 odd days.
Now, the Day on 25th December – Sunday + 4 days = Thursday
Hence, Thursday is correct.

85. (c) The correct answer is option (c) i.e. Wednesday.
Given: 3rd of a month is Monday
We know that day repeats after every 7 days So, if 3rd is monday, 10th, 17th, 24th will be also monday.
5th day from 21st will be 26th of the same month.
So, if 24th is monday, 26th will be wednesday.

86. (b) The correct answer is option (b) i.e. Thursday.
Given: Thursday on February 1, 2007
Day on February 1, 2006
Thursday – 1 = Wednesday
February 2, 2006 = 1 February 2006 + 1 day = Wednesday + 1 = Thursday

87. (b) The correct answer is option (b) i.e. Tuesday.
Number of odd days from 16th April 2020 to 2nd June 2020 = 14 + 3 + 2 = 19
This implies that 16th April 2020 + 19 odd days = 2nd June 2020
As we know a month with 31 days has 3 odd days and a month with 30 days has 2 odd days.
May has 31 days so it has 3 odd days)
19 when divided by 7, we get 5 as remainder.
Thursday + 5 odd days = Tuesday
So, it was Tuesday on 2nd June 2020.

88. (d) The correct answer is option (d) i.e. Tuesday.
Given 21st February 2005 was a Sunday.
Since 2005 is non-leap year.
Number of odd days from year 21st February 2005 to 21st February 2007 = (1 + 1) = 2 Odd days.
On 21st February 2005, it was Sunday + 2 = Tuesday.

CAREERWILL APP
Easy to Learn....

Thus, 'Tuesday' is day of the week on 21st February 2007.

89. (b) The correct answer is option (b) i.e. Friday.
Given: 16th April 2021 was on a Saturday
The total number of days = 14(April) + 31 (May) + 3(June)
The total number of days = 48
The number of odd days from 16th April 2021 until 3rd June 2021 = 48 ÷ 7 = 6 odd days
16th April 2021, it was Saturday + 6 odd days = Friday.
Thus, Amit's wife's birthday on 3rd June 2021 is 'Friday'.

90. (a) The correct answer is option (a) i.e. 77.
Number of days starting from 26th February 2020 to 26th May 2020 = February (4) + March (31) + April (30) + May (25) = 90 days as 2020 is a leap year.
So, 26 February (Wednesday) + 4 = 1 March (Sunday)
Since it was Sunday on 1st March, every 7th day from 1st March will be a Sunday
Total number of Sundays from 26th February 2020 to 26th May 2020 = March (5) + April (4) + May (4) = 13
Total number of working days = Total number of days – Total number of Sundays = 90 – 13 = 77

91. (b) The correct answer is option (b) i.e. 9th.
According to Ajay, mother's birthday can be on 6th, 7th, 8th, and 9th of June.
According to his sister, mother's birthday can be on the 9th and 10th of June.
So, the 9th of June is common in both the statement. Thus, my mother's birthday is on 9th of June.

92. (c) The correct answer is option (c) i.e. Saturday.
2nd February 2007 + 365 days = 2nd February 2008 (since 2008 is a leap year but we are counting only up to 2nd February)
365 days = 1 odd day, Therefore, 2nd February 2008 is Saturday.

93. (d) The correct answer is option (d) i.e. Monday.
Days between 10th March 2020 – 25th May 2020 = 21 (March) + 30 (April) + 25 (May)
76 days = 76 ÷ 7 = 6 odd day
Tuesday + 6 = Monday

94. (d) The correct answer is option (d) i.e. Saturday
No of days from 3rd February 2015 to 6th June 2015 = 25 + 31 + 30 + 31 + 6 = 123
It was Tuesday on 3rd February 2015, every 7th day from 3rd February will be Tuesday.
Thus, no of odd days = 123 ÷ 7 = 4
Now, 3rd February 2015 (Tuesday) + 4 odd days = 6th June 2015 (Saturday)
Thus, 6th June 2015 will be Saturday.

95. (d) The correct answer is option (d) i.e. Saturday
No of days from 19th July 2019 to 21st September 2019 = 64 days as 2019 is a non-leap year.
Since, it was Friday on 19th July 2019, every 7th day from 19th July will be a Friday.
Thus, no of odd days = 64 ÷ 7 = 1
So, 19th July 2019 (Friday) + 1 odd day = Saturday
Thus, 21st September 2019 will be Saturday.

96. (b) The correct answer is option (b) i.e. Tuesday.
Number of odd days in 2012 = 1600 + 400 + 11 years + 10 days of January.
1600 years has 0 odd days.
400 years has 0 odd days.
Then the number of odd days = (2 × 2) + (9 × 1) = 13 odd days + 10 days of January.
Total number of odd days = (13 + 10) ÷ 7 = 3 week and 2 days.
There are 2 odd days and 2 is the code of Tuesday.

97. (b) The correct answer is option (b) i.e. Sunday.
The odd days from 15 March 2020 to 15 March 2022 = 2 odd days
15 March 2022 was a Tuesday, so 15 March 2020 will be = (Tuesday – 2) = Sunday

98. (a) The correct answer is option (a) i.e. Saturday.

CAREERWILL APP
Easy to Learn....

1 January 2011 = Saturday
Total Number of days from 1 January 2011 to 31 December 2011:
= (30 + 28 + 31 + 30 + 31 + 30 + 31 + 31 + 30 + 31 + 30 + 31) = 364
Now, 364 ÷ 7 = 52 weeks
So, 31 December 2011 is Saturday.

99. (d) The correct answer is option (d) i.e. Sunday.
28 March 2017 = Tuesday
Total Number of days from 12 February 2017 to 28 March 2017 = 16 + 28 = 44 ÷ 7 = 2 odd days
So, the day on 12 February 2017 = Tuesday – 2 = Sunday
Hence, the correct answer is Sunday.

100. (b) The correct answer is option (b) i.e. 1 May 2020, Wednesday.
22nd of January 2020 = Monday
100 ÷ 7 = 2 (odd days) remainder
So, Monday + 2 = Wednesday
22 January + 100 days = 9 (January) + 29 (February) + 31 (March) + 30 (April) + 1 (May)
Hence, the date and day will it be after 100 days from today 1 May 2020, Wednesday.

101. (b) The correct answer is option (b) i.e. Tuesday
Till 2005 → 2000(1600 + 400) + 5
Odd days in 1600 years = 0
Odd days in 400 years = 0
In 5 years = 1 leap year + 4 ordinary year
Odd days in 5 years = (1 × 2) + (1 × 4) = 6 odd days
And, till 10th January 2006, we have 10 odd days.
Therefore, total number of odd days → 6+10 = 16 days = 16 ÷ 7 = 2 weeks and 2 odd days.
→ 2 represents a Tuesday.
So, 10th January, 2006 was a Tuesday

102. (b) The correct answer is option (b) i.e. Monday.
8 March 2009 = Sunday
From 8 March 2009 to 8 March 2020 = 3 leap years and 8 ordinary years
Odd days in 3 leap years = (2 × 3) = 6
Odd days in 8 ordinary years = (1 × 8) = 8
Odd days from 8 March 2020 to 1 February 2021 = {23 (March) + 30(April) + 31(May) + 30 (June) + 31(July) + 31(August) + 30(September) + 31(October) + 30(November) + 31(December) + 31 (January) + 1(February)} ÷ 7
= 330 ÷ 7 = 1 odd day (remainder)
Total odd days = 6 + 8 + 1 = 15 ÷ 7 = 1 odd day
Hence, the day of the week on 1 February 2021 = Sunday + 1 = Monday

103. (c) The correct answer is option (c) i.e. Tuesday.
From 15 May 2001 to 15 May 2013 = 3 leap years and 9 ordinary years
Odd days in leap years = (2 × 3) = 6
Odd days in ordinary years = (1 × 9) = 9
Now, days from 15 May 2013 to 11 June 2013 = 27
Total odd days = 6 + 9 + 27 = 42 ÷ 7 0 odd day.
Hence, the day of the week on 11 June 2013 will be Tuesday.

104. (a) The correct answer is option (a) i.e. Sunday.
4th March 2018 = Wednesday
From 4th March 2018 to 4th March 2019 = 1 odd day
So, 4th March 2019 = Wednesday + 1 = Thursday
Hence, 7th March in 2019 will be = Thursday + 3 = Sunday.

105. (c) The correct answer is option (c) i.e. Wednesday.
Today = Tuesday,
64 days = 9 weeks + 1 odd day
Hence, the 64th day from today will be:
= Tuesday + 1 = Wednesday

106. (b) The correct answer is option (b) i.e. Thursday.
Total odd days: 1 (2006) + 1 (2007) + 2 (2008) + 1 (2009) = 5 days
Since 31 December 2005 was a Saturday, moving 5 days forward brings us to:
Saturday + 5 days = Thursday.
So, 31 December 2009 will be a Thursday.

107. (d) The correct answer is option (d) i.e. Sunday.

CAREERWILL APP
Easy to Learn....

As we know 2004 is a leap year.
But February 2004 does not fall between March 2004 and 2005. So, there will be 1 odd day.
So, Monday – 1 = Sunday
So, if 6 March 2005 is a Monday, then 6 March 2004 should be Sunday.

108. (c) The correct answer is option (c) i.e. 2, 9, 16, 23 of February.
No. of odd days in the year 2000 = 0 (a century leap year)
No. of odd days from 2001 to 2019 = (No. of ordinary year × 1) + (No. of Leap year × 2)
= 15 × 1 + 4 × 2 = 23 ÷ 7 = 2 odd days
Thus, no. of odd days upto 1 Feb 2020 = 0 + 2 + 32 = 34 ÷ 7 = 6 odd days
So, 1 February 2020 would be a Saturday. Thus, the first Sunday of February 2020 falls on the 2nd date. The next Sunday will fall after 7 days.
February 2, 2020 (first Sunday)
February 9, 2020 (second Sunday)
February 16, 2020 (third Sunday)
February 23, 2020 (fourth Sunday)
February 29, 2020 (fifth Sunday)
Therefore, the Sundays in February 2020 are: 2, 9, 16, 23, and 29.

109. (c) The correct answer is option (c) i.e. Sunday
Odd days for 2000 years = 0
Odd days for 19 years = (4 leap years + 15 normal years) = 4 × 2 + 15 × 1 = 23 = 2 odd days.
January to March = 31 + 29 + 15 = 75 = 5 odd days
Total odd days = 2 + 5 = 7 = 0 odd days.
So, given day is Sunday.
Hence, the correct answer is Sunday.

110. (d) The correct answer is Option (d) i.e. 2024
For repeating the same day on the same date, the number of odd days between the years should be 7. Let us explain this:
Number of odd days in 2018 = 1
Number of odd days in 2019 = 1
Number of odd days in 2020 = 2
Number of odd days in 2021 = 1
Number of odd days in 2022 = 1
Number of odd days in 2023 = 1
1 + 1 + 2 + 1 + 1 + 1 = 7
Hence, the correct answer is 2024.

111. (a) The correct answer is option (a) i.e. 11th July 2016.
Aizaz was born on 5th January 2015.
As we know 2015 is not a leap year. So,
5th January 2015 + 365 days = 5th January 2016
553 – 356 = 188 days
So, now the remaining days in a month from 5th January 2016 to 30th June 2016
2016 is a leap year.
Jan = 26, Feb = 29, march = 31, April = 30, May = 31, June = 30
We get 26 + 29 + 31 + 30 + 31 + 30 = 177
So, 188 – 177 = 11 days
30th June 2016 + 11 days = 11th July 2016
So, Faiz was born on 11th July 2016.
Hence, 11th July 2016 is the correct answer.

112. (b) The correct answer is option (b) i.e. 2076.
Same Calender for the year
Year just after a leap year: Add 6
2nd Year after a leap year: Add 11
3rd Year after a leap year: Add 11
Leap year: Add 28
Since 2020 is a leap year so, 2020 + 28 = 2048;
2048 + 28 = 2076;
Although 2048 is not given in options, we can consider 2076.
Hence, the correct answer is 2076.

113. (b) The correct answer is option (b) i.e. Thursday.
15th February 2018 is a Thursday.
2018 or 2019 is not a leap year.
So, number of odd days between 15th February 2018 to 15 February 2019 is one day.
So, 15th February 2019 = Thursday + 1 = Friday
And, Number of Days between 15th February 2019 to 18th April 2019 = 13 days (February) + 31 days (March) + 18 days (April) = 62 days
The number of odd days in 62 days = 62 ÷ 7

= 6 odd days.
So, 18th April 2019 = Friday + 6 = Thursday.
Hence, the correct answer is thursday.

114. (b) The correct answer is option (b) i.e. Tuesday.
Total number of days from19th May 2012 to 1st April 2014 = (12 + 30 + 31 + 31 + 30 + 31 + 30 + 31 + 31 + 28 + 31 + 30 + 31 + 30 + 31 + 31 + 30 + 31 + 30 + 31 + 31 + 28 + 31 + 1) = 682
Total number of odd days = 682 ÷ 7 = 3 odd days.
So, Saturday + 3 = Tuesday.
Thus, 1st April 2014 was a Tuesday.
Hence, the correct answer is Tuesday.

115. (a) The correct answer is option (a) i.e. Tuesday.
Number of odd days in 2000 years = 0
Number of odd days in 19 years = (4 leap years + 15 ordinary years) = (4 × 2 + 15) = 23
23 odd days = (3 weeks + 2 days) = 2 odd days
1 January 2020 to 1 September 2020:
= (31 + 29 + 31 + 30 + 31 + 30 + 31 + 31 + 1) = 245 odd days
245 odd days = (35 weeks) = 0 odd days
Therefore total odd days = 2
Hence on 1st September 2020 it will be Tuesday.
