Reasoning — Series (sample chapter)

EkGuru Learning · Reasoning chapter ka namuna

Namuna (sample)

Ye file sirf folder ka format dikhane ke liye hai. Apne asli chapter ki PDF isi folder me rakh dijiye — website par wo bhi apne aap aa jayegi.

EkGuru Learning · By PRAKASH

1. Number series kaise kaam karti hai

Series me numbers ek hi niyam (pattern) se chalte rehte hain. Jawab dhoondhne ka tareeka:

- Pehle do padosi numbers ka **antar (difference)** dekho — 2, 6, 12, 20 me antar 4, 6, 8 hai.
- Antar barabar na ho to **antar ka antar** dekho — yahan 4, 6, 8 har baar 2 badh raha hai.
- Antar me pattern na mile to **guna/bhaag** dekho — 3, 6, 12, 24 har baar ×2 hai.
- Varg (1, 4, 9, 16 …), ghan (1, 8, 27, 64 …), abhajya sankhya (2, 3, 5, 7, 11, 13 …) aur Fibonacci (1, 1, 2, 3, 5, 8 …) bhi aksar pooche jaate hain.

2. Letter series aur varnmala

Angrezi varnmala me har letter ka ek number hota hai: A = 1, B = 2, … Z = 26. Letter series me aksar +2, +3, +4 … ya –1, –2, –3 … ka pattern hota hai. Ulti series bhi aati hai, jaise Z, X, V, T (har baar –2). Yaad rakhne wale jod: **EJOTY** — E = 5, J = 10, O = 15, T = 20, Y = 25.

3. Solved examples

Example 1 — 2, 6, 12, 20, 30, ? Antar: 4, 6, 8, 10 — har baar 2 badh raha hai. Agla antar 12 hoga, isliye jawab 30 + 12 = 42.

Example 2 — 3, 6, 12, 24, ? Har number pichle number ka dugna hai (×2). Isliye 24 × 2 = 48.

Example 3 — 1, 4, 9, 16, ? Ye 1^2, 2^2, 3^2, 4^2 hain. Agla $5^2 = 25$.

Example 4 — 8, 27, 64, 125, ? Ye 2^3, 3^3, 4^3, 5^3 hain. Agla $6^3 = 216$.

Example 5 — A, C, F, J, O, ? A(1) se C(3) = +2, C se F = +3, F se J = +4, J se O = +5. Agla +6 hoga: O(15) + 6 = 21 = U.

Example 6 — 11, 13, 17, 19, 23, ? Ye lagatar abhajya sankhyayen (prime numbers) hain. 23 ke baad agla prime 29 hai.

4. Practice kahan milegi

Is subject ke **Practice questions** folder me isi chapter ke 12 sawal hain, aur **Answers & explanations** folder me har sawal ka jawab ek-line hal ke saath diya gaya hai. **Tests** folder me 10 sawalon ka mixed test paper hai.

5. Dhyan rakhne wali baatein

- Jawab hamesha options se milao — kabhi-kabhi do pattern bante hain, par options me sirf ek hi lagta hai.
- Time bachao: pehla antar dekh kar pattern mil gaya to aage na socho.
- Fractions se na daro — 120, 60, 30, 15, 7.5 me bhi wahi ÷2 ka niyam hai.
